VOS[™] Service for the Hotel Industry

VOS[™] has the best model for providing computer resources to Hotels and Motels- which is why this industry is a niche vertical for VOS[™] services. Hotels traditionally struggle with high technology costs and issues related to maintaining a complex network and having many locations with just a few people per site. VOS[™] is an excellent fit by providing centralized resources for secure single point of entry, fully managed program maintenance, backup and more. Hotels benefit from a simple network of computers with Internet access allowing secure access to VOS[™] from each location. And industry specific software for Hotels/Motels? Yes, VOS[™] can do that too!

Primary Decision Drivers:

- ❖ **Finance** – Building and maintaining technology infrastructure is not in line with the core business strategy of the Hotel Industry. Using VOS[™] services keeps costs low, while providing maximum operational efficiencies and data protection. No need to buy or upgrade servers!
- ❖ **Scalability** – Programs and data are accessible from nearly any computer with Internet connectivity. Hotels can add sites easily without buying expensive equipment or building complex networks.

VOS[™] provides software like Microsoft[®] Word, Microsoft[®] Excel, Microsoft[®] Outlook email with Microsoft[®] Exchange Server, and other business programs directly through a secure website. The low, predictable monthly fee for service preserves a significant amount of money that can be directed to other, more important purposes that support business development!

- Work from nearly any computer with Internet access
- Free upgrades on Microsoft[®] Office programs
- Off-site Backup of your programs and data
- Consistent speed and responsiveness
- Predictable, low monthly service fee
- Secure data storage
- 24 x 7 support line
- and MORE!!!
