VOS™ - Best Fit for Property Management Companies

VOS™ has the best model for providing computer resources to Property Management companies- which is why this industry is an expanding market for VOS™ services. Property Management companies traditionally struggle with duplicate input, software version & license tracking, backup and related technology issues resulting from having many locations with just a few people per site. VOS™ is an excellent fit by providing centralized resources for single point of entry, program maintenance, backup and more- requiring only a computer with Internet access at each location. And industry specific software for Property Management? Yes, VOS™ can do it too!

Primary Decision Drivers:

❖ **Finance** – Building and maintaining technology infrastructure is not in line with the business strategy of Property Management companies. Using VOS™ services keeps costs low, while providing maximum operational efficiencies and data protection. No need to buy or upgrade servers!

❖ **Scalability** – Programs and data are accessible from nearly any computer with Internet connectivity. Property Management companies can add sites easily without buying expensive equipment or building complex networks.

VOS™ provides software like Microsoft® Word, Microsoft® Excel, Microsoft® Outlook email with Microsoft® Exchange Server, and other business programs directly through a secure website. The low monthly fee for service preserves a significant amount of money that can be directed to other, more important purposes that support business development!

➢ Work from nearly any computer with Internet access
➢ Free upgrades on Microsoft® Office programs
➢ Daily Backup of your programs and data
➢ Consistent speed and responsiveness
➢ Predictable monthly service fee
➢ Secure data storage
➢ 24 x 7 support line
➢ and MORE!!!
